

# Weatherized Finish

Introducing PDQ's Weatherized (W) Finish. This coating serves to enhance the durability and lifespan of the underlying finish by providing protection against weather-induced damage, such as corrosion resulting from prolonged exposure to sunlight and moisture. The coatings color is 'Slip Clear' so it appears transparent to the eye.

The W-Finish application involves strategically spraying a clear powder coating over the traditional finish, adding an extra layer of protection while enhancing thickness and visibility. The meticulous curing process further solidifies the W-Finish's reputation for durability. With a swift cure time of just 7 minutes at 400 degrees, this coating surpasses industry standards, meeting the rigorous AAMA 2603 criteria for weather durability.

Industries such as beachfront properties, coastal hotels, and poolside facilities particularly benefit from weatherized door hardware finishes. In environments with constant exposure to humidity, salt, and chlorinated water, the superior protection of the W-Finish is essential for preserving door hardware functionality and aesthetics.

**\*Available for the following products:**

- XGT Cylindrical Lock
- GT Cylindrical Lock
- GP Cylindrical Lock
- F Trim Mortise Lock
- 6W Trim
- 6S Trim

*\* Please be aware that the W-Finish is exclusively available for the 626 (satin chrome) finish*
